

# Package ‘debrowser’

October 12, 2016

**Type** Package

**Title** debrowser: Interactive Differential Expression Analysis Browser

**Version** 1.0.10

**Date** 2016-07-05

**Author** Alper Kucukural <alper.kucukural@umassmed.edu>,  
Nicholas Merowsky <nicholas.merowsky@umassmed.edu>,  
Manuel Garber <manuel.garber@umassmed.edu>

**Maintainer** Alper Kucukural <alper.kucukural@umassmed.edu>

**Description** Bioinformatics platform containing interactive plots and tables for differential gene and region expression studies. Allows visualizing expression data much more deeply in an interactive and faster way. By changing the parameters, user can easily discover different parts of the data that like never have been done before. Manually creating and looking these plots takes time. With this system users can prepare plots without writing any code. Differential expression, PCA and clustering analysis are made on site and the results are shown in various plots such as scatter, bar, box, volcano, ma plots and Heatmaps.

**Depends** R (>= 3.3.0), shiny, ggvis, jsonlite, edgeR, shinyjs

**License** GPL-3 + file LICENSE

**LazyData** true

**Imports** clusterProfiler, DT, ReactomePA, ggplot2, RColorBrewer, annotate, gplots, AnnotationDbi, DESeq2, DOSE, igraph, grDevices, graphics, stats, utils, GenomicRanges, IRanges, S4Vectors, SummarizedExperiment, stringi, reshape2, org.Hs.eg.db, org.Mm.eg.db

**RoxygenNote** 5.0.1

**Suggests** testthat, rmarkdown, knitr, R.rsp

**VignetteBuilder** knitr, R.rsp

**URL** <https://github.com/UMMS-Biocode/debrowser>

**BugReports** <https://github.com/UMMS-Biocode/debrowser/issues/new>

**biocViews** Sequencing, ChIPSeq, RNASeq, DifferentialExpression,  
GeneExpression, Clustering

**NeedsCompilation** no

<b>Index</b>	<b>60</b>
--------------	-----------

---

addID	<i>addID</i>
-------	--------------

---

### Description

Adds an id to the data frame being used.

### Usage

```
addID(data = NULL)
```

### Arguments

data,           loaded dataset

### Value

data

### Examples

```
x <- addID()
```

---

add_title_pos	<i>add_title_pos</i>
---------------	----------------------

---

### Description

Adds a title with extra axis to ggvis plot and sets the positions

### Usage

```
add_title_pos(vis, ..., title = "Plot Title", align = "left", angle = 0,
  dx = 0, dy = 0)
```

**Arguments**

vis,	a ggvis plot
...,	any additional arguments
title	for the plot
align	position of the title c('left','right')
angle	of the labels in x axis
dx,	relative x position of the labels in the x axis
dy,	relative y position of the labels in the x axis

**Value**

deseq2 results

**Examples**

```
require(ggvis)
mtcars %>%
  ggvis(x=~cyl, y=~wt, fill=~mpg) %>%
  group_by(mpg) %>%
  layer_bars() %>%
  add_title_pos(title = "title", angle=310, dy=0, dx=0) %>%
  set_options(width = 400, height = 350)
```

---

all2all

*all2all*

---

**Description**

Prepares all2all scatter plots for given datasets.

**Usage**

```
all2all(data, cex = 2)
```

**Arguments**

data,	data that have the sample names in the header.
cex	text size

**Value**

all2all scatter plots

**Examples**

```
plot<-all2all(mtcars)
```

---

<code>applyFilters</code>	<i>applyFilters</i>
---------------------------	---------------------

---

**Description**

Applies filters based on user selected parameters to be displayed within the DEBrowser.

**Usage**

```
applyFilters(filt_data = NULL, cols = NULL, input = NULL)
```

**Arguments**

<code>filt_data</code> ,	loaded dataset
<code>cols</code> ,	selected samples
<code>input</code> ,	input parameters

**Value**

data

**Examples**

```
x <- applyFilters()
```

---

<code>applyFiltersToMergedComparison</code>	<i>applyFiltersToMergedComparison</i>
---------------------------------------------	---------------------------------------

---

**Description**

Gathers the merged comparison data to be used within the DEBrowser.

**Usage**

```
applyFiltersToMergedComparison(merged = NULL, nc = NULL, input = NULL)
```

**Arguments**

<code>merged</code> ,	merged data
<code>nc</code> ,	the number of comparisons
<code>input</code> ,	input params

**Value**

data

**Examples**

```
x <- applyFiltersToMergedComparison()
```

---

cellInfo

*cellInfo*

---

**Description**

hover info in heatmap

**Usage**

```
cellInfo(x = NULL)
```

**Arguments**

x, data

**Value**

data

**Examples**

```
x <- cellInfo()
```

---

clusterData

*clusterData*

---

**Description**

Gathers the Cluster analysis data to be used within the GO Term plots.

**Usage**

```
clusterData(dat)
```

**Arguments**

dat, the data to cluster

**Value**

clustered data

**Note**

clusterData

**Examples**

```
mycluster <- clusterData(mtcars)
```

---

compareClust

*compareClust*

---

**Description**

Compares the clustered data to be displayed within the GO Term plots.

**Usage**

```
compareClust(dat = NULL, ont = "CC", org = "org.Hs.eg.db",  
             fun = "enrichGO", title = "Ontology Distribution Comparison",  
             pvalueCutoff = 0.01)
```

**Arguments**

dat,	data to compare clusters
ont,	the ontology to use
org,	the organism used
fun,	fun
title,	title of the comparison
pvalueCutoff,	pvalueCutoff

**Value**

compared cluster

**Note**

compareClust

**Examples**

```
x <- compareClust()
```

---

deServer	<i>deServer</i>
----------	-----------------

---

**Description**

Sets up shinyServer to be able to run DEBrowser interactively.

**Usage**

```
deServer(input, output, session)
```

**Arguments**

input,	input params from UI
output,	output params to UI
session,	session variable

**Value**

the panel for main plots;

**Note**

deServer

**Examples**

```
deServer
```

---

deUI	<i>deUI</i>
------	-------------

---

**Description**

Creates a shinyUI to be able to run DEBrowser interactively.

**Usage**

```
deUI()
```

**Value**

the panel for main plots;

**Note**

deUI

**Examples**

```
x<-deUI()
```

---

getAfterLoadMsg	<i>getAfterLoadMsg</i>
-----------------	------------------------

---

**Description**

Generates and displays the message to be shown after loading data within the DEBrowser.

**Usage**

```
getAfterLoadMsg()
```

**Value**

return After Load Msg

**Note**

getAfterLoadMsg

**Examples**

```
x <- getAfterLoadMsg()
```

---

getColor	<i>getColor</i>
----------	-----------------

---

**Description**

get colors for the domains

**Usage**

```
getColor(domains = NULL)
```

**Arguments**

domains, domains to be colored

**Value**

colors

**Examples**

```
x<-getColors()
```

---

`getCompSelection`      *getCompSelection*

---

**Description**

Gathers the user selected comparison set to be used within the DEBrowser.

**Usage**

```
getCompSelection(count = NULL)
```

**Arguments**

count,                  comparison count

**Note**

```
getCompSelection
```

**Examples**

```
x <- getCompSelection(count = 2)
```

---

`getConditionSelector`      *getConditionSelector*

---

**Description**

Selects user input conditions to run in DESeq.

**Usage**

```
getConditionSelector(num = 0, choices = NULL, selected = NULL)
```

**Arguments**

num,                      panel that is going to be shown  
choices,                  sample list  
selected,                  selected smaple list

**Examples**

```
x <- getConditionSelector()
```

---

getCondMsg

*getCondMsg*

---

**Description**

Generates and displays the current conditions and their samples within the DEBrowser.

**Usage**

```
getCondMsg(cols = NULL, conds = NULL)
```

**Arguments**

cols,	columns
conds,	selected conditions

**Value**

return conditions

**Note**

getCondMsg

**Examples**

```
x <- getCondMsg()
```

---

getCutOffSelection

*getCutOffSelection*

---

**Description**

Gathers the cut off selection for DE analysis

**Usage**

```
getCutOffSelection(flag = TRUE, nc = 1)
```

**Arguments**

flag,                    flag to show the element in the ui  
 nc,                    total number of comparisons

**Value**

returns the left menu according to the selected tab;

**Note**

getCutOffSelection

**Examples**

```
x <- getCutOffSelection()
```

*getDataForTables*                    *getDataForTables* get data to fill up tables tab

**Description**

*getDataForTables* get data to fill up tables tab

**Usage**

```
getDataForTables(input = NULL, init_data = NULL, filt_data = NULL,  

    selected = NULL, getMostVaried = NULL, mergedComp = NULL)
```

**Arguments**

input,                    input parameters  
 init\_data,            initial dataset  
 filt\_data,            filt\_data  
 selected,            selected genes  
 getMostVaried,        most varied genes  
 mergedComp,          merged comparison set

**Value**

data

**Examples**

```
x <- getDataForTables()
```

---

`getDataPrepPanel`      *getDataPrepPanel*

---

**Description**

Create and show the Condition selection screen to the user within the DEBrowser.

**Usage**

```
getDataPrepPanel(flag = FALSE)
```

**Arguments**

`flag`,                  flag to show the element in the ui

**Value**

returns the left menu according to the selected tab;

**Note**

```
getDataPrepPanel
```

**Examples**

```
x <- getDataPrepPanel()
```

---

`getDomains`                  *getDomains*

---

**Description**

Get domains for the main plots.

**Usage**

```
getDomains(filt_data = NULL)
```

**Arguments**

`filt_data`,              data to get the domains

**Value**

domains

**Examples**

```
x<-getDomains()
```

---

getDown	<i>getDown get down regulated data</i>
---------	----------------------------------------

---

**Description**

getDown get down regulated data

**Usage**

```
getDown(filt_data = NULL)
```

**Arguments**

filt\_data,      filt\_data

**Value**

data

**Examples**

```
x <- getDown()
```

---

getDownloadSection	<i>getDownloadSection</i>
--------------------	---------------------------

---

**Description**

download section button and dataset selection box in the menu for user to download selected data.

**Usage**

```
getDownloadSection(flag = FALSE, type = "main")
```

**Arguments**

flag,              to show the download selection  
type,              main vs. QC section

**Value**

the panel for download section in the menu;

**Note**

getDownloadSection

**Examples**

```
x<- getDownloadSection()
```

---

getEnrichDO

*getEnrichDO*

---

**Description**

Gathers the Enriched DO Term analysis data to be used within the GO Term plots.

**Usage**

```
getEnrichDO(genelist = NULL, pvalueCutoff = 0.01)
```

**Arguments**

genelist,      gene list  
pvalueCutoff,    the p value cutoff

**Value**

enriched DO

**Note**

getEnrichDO

**Examples**

```
x <- getEnrichDO()
```

---

getEnrichGO

*getEnrichGO*

---

**Description**

Gathers the Enriched GO Term analysis data to be used within the GO Term plots.

**Usage**

```
getEnrichGO(genelist = NULL, pvalueCutoff = 0.01, org = "org.Hs.eg.db",  
          ont = "CC")
```

**Arguments**

genelist,      gene list  
pvalueCutoff,      p value cutoff  
org,      the organism used  
ont,      the ontology used

**Value**

Enriched GO

**Note**

getEnrichGO

**Examples**

```
x <- getEnrichGO()
```

---

getEnrichKEGG      *getEnrichKEGG*

---

**Description**

Gathers the Enriched KEGG analysis data to be used within the GO Term plots.

**Usage**

```
getEnrichKEGG(genelist, pvalueCutoff = 0.01, org = "org.Hs.eg.db")
```

**Arguments**

genelist,      gene list  
pvalueCutoff,      the p value cutoff  
org,      the organism used

**Value**

Enriched KEGG

**Note**

getEnrichKEGG

**Examples**

```
genelist<-getGeneList(c('OCLN', 'ABCC2'))  
x <- getEnrichKEGG(genelist,NULL)
```

---

`getGeneList`*getGeneList*

---

**Description**

Gathers the gene list to use for GOTerm analysis.

**Usage**

```
getGeneList(genes = NULL, org = "org.Hs.eg.db")
```

**Arguments**

<code>genes,</code>	gene list
<code>org,</code>	organism for gene symbol entrez ID conversion

**Value**

ENTREZ ID list

**Note**

GOTerm  
getGeneList symbol to ENTREZ ID conversion

**Examples**

```
x <- getGeneList(c('OCLN', 'ABCC2'))
```

---

`getGeneSetData`*getGeneSetData*

---

**Description**

Gathers the specified gene set list to be used within the DEBrowser.

**Usage**

```
getGeneSetData(data = NULL, geneset = NULL)
```

**Arguments**

<code>data,</code>	loaded dataset
<code>geneset,</code>	given gene set

**Value**

data

**Examples**

```
x <- getGeneSetData()
```

---

`getGOLeftMenu`                      *getGOLeftMenu*

---

**Description**

Generates the GO Left menu to be displayed within the DEBrowser.

**Usage**

```
getGOLeftMenu()
```

**Value**

returns the left menu according to the selected tab;

**Note**

`getGOLeftMenu`

**Examples**

```
x <- getGOLeftMenu()
```

---

`getGoPanel`                      *getGoPanel*

---

**Description**

Creates go term analysis panel within the shiny display.

**Usage**

```
getGoPanel(flag = FALSE)
```

**Arguments**

`flag`,                      flag to show the element in the ui

**Value**

the panel for go term analysis;

**Note**

getGoPanel

**Examples**

```
x <- getGoPanel()
```

---

getGOPlots

*getGOPlots*

---

**Description**

Go term analysis panel. Generates appropriate GO plot based on user selection.

**Usage**

```
getGOPlots(dataset = NULL, input = NULL)
```

**Arguments**

dataset,        the dataset used  
input,         input params

**Value**

the panel for go plots;

**Note**

getGOPlots

**Examples**

```
x<- getGOPlots()
```

---

getHoverPlots	<i>getHoverPlots</i>
---------------	----------------------

---

**Description**

Prepares the plots going to be shown when a gene hovered in the main plots

**Usage**

```
getHoverPlots(bardata = NULL, genename = NULL)
```

**Arguments**

bardata,	barplot data
genename,	gene name in the barplots

**Examples**

```
getHoverPlots()
```

---

getInitialMenu	<i>getInitialMenu</i>
----------------	-----------------------

---

**Description**

Displays the initial menu within DEBrowser.

**Usage**

```
getInitialMenu(input = NULL, output = NULL, session = NULL)
```

**Arguments**

input,	input from user
output,	output to user
session,	session info

**Value**

returns the initial menu

**Note**

```
getInitialMenu
```

**Examples**

```
x <- getInitialMenu()
```

---

<code>getIntHeatmap</code>	<i>getIntHeatmap</i>
----------------------------	----------------------

---

**Description**

`getIntHeatmap`

**Usage**

```
getIntHeatmap(heatdat = NULL, count = NULL, lbheat = NULL)
```

**Arguments**

<code>heatdat</code> ,	heatData
<code>count</code> ,	count
<code>lbheat</code> ,	linked brush object

**Value**

plot

**Examples**

```
getIntHeatmap()
```

---

<code>getIntHeatmapVis</code>	<i>getIntHeatmapVis</i>
-------------------------------	-------------------------

---

**Description**

Gathers the conditional panel for interactive heatmap

**Usage**

```
getIntHeatmapVis(randstr = NULL)
```

**Arguments**

<code>randstr</code> ,	randstr
------------------------	---------

**Value**

the panel interactive heatmap

**Note**

`getIntHeatmapVis`

**Examples**

```
x <- getIntHeatmapVis()
```

---

`getLeftMenu`

*getLeftMenu*

---

**Description**

Generates the left menu for for plots within the DEBrowser.

**Usage**

```
getLeftMenu(flag = TRUE)
```

**Arguments**

`flag`, flag to show the element in the ui

**Value**

returns the left menu according to the selected tab;

**Note**

`getLeftMenu`

**Examples**

```
x <- getLeftMenu()
```

---

<code>getLoadingMsg</code>	<i>getLoadingMsg</i>
----------------------------	----------------------

---

**Description**

Creates and displays the loading message/gif to be displayed within the DEBrowser.

**Usage**

```
getLoadingMsg()
```

**Value**

loading msg

**Note**

```
getLoadingMsg
```

**Examples**

```
x <- getLoadingMsg()
```

---

<code>getLogo</code>	<i>getLogo</i>
----------------------	----------------

---

**Description**

Generates and displays the logo to be shown within DEBrowser.

**Usage**

```
getLogo()
```

**Value**

return logo

**Note**

```
getLogo
```

**Examples**

```
x <- getLogo()
```

---

getMainPanel	<i>getMainPanel</i>
--------------	---------------------

---

**Description**

main panel for volcano, scatter and maplot. Barplot and box plots are in this page as well.

**Usage**

```
getMainPanel(randstr = NULL)
```

**Arguments**

randstr,            random string for the plot containers

**Value**

the panel for main plots;

**Note**

getMainPanel

**Examples**

```
x <- getMainPanel()
```

---

getMainPanelPlots	<i>getMainPanelPlots</i>
-------------------	--------------------------

---

**Description**

Gathers the the plots to be used within the main panel.

**Usage**

```
getMainPanelPlots(filt_data = NULL, cols = NULL, conds = NULL,  
                  input = NULL, compselect = NULL)
```

**Arguments**

filt\_data,        filtered data  
cols,            selected columns  
conds,            selected conditions  
input,            input from ui  
compselect,      selected comparison number

**Value**

panel

**Examples**

```
x <- getMainPanelPlots()
```

---

getMean

*getMean*

---

**Description**

Gathers the mean for selected condition.

**Usage**

```
getMean(norm_data = NULL, de_res = NULL, inputconds = NULL,  
        colnum = NULL)
```

**Arguments**

norm_data,	loaded dataset
de_res,	de results
inputconds,	input parameters
colnum,	colnum

**Value**

data

**Examples**

```
x <- getMean()
```

---

getMergedComparison    *getMergedComparison*

---

**Description**

Gathers the merged comparison data to be used within the DEBrowser.

**Usage**

```
getMergedComparison(Dataset = NULL, dc = NULL, nc = NULL, input = NULL)
```

**Arguments**

Dataset,	whole data
dc,	data container
nc,	the number of comparisons
input,	input params

**Value**

data

**Examples**

```
x <- getMergedComparison()
```

---

getMostVariedList    *getMostVariedList*

---

**Description**

Calculates the most varied genes to be used for specific plots within the DEBrowser.

**Usage**

```
getMostVariedList(datavar = NULL, cols = NULL, topn = 500,  
  mincount = 10)
```

**Arguments**

datavar,	loaded dataset
cols,	selected columns
topn,	most varied records
mincount,	total min read count for selected samples

**Value**

data

**Examples**

```
x <- getMostVariedList()
```

---

`getNormalizedMatrix`    *getNormalizedMatrix*

---

**Description**

Normalizes the matrix passed to be used within various methods within DEBrowser. Requires edgeR package

**Usage**

```
getNormalizedMatrix(M = NULL, method = "TMM")
```

**Arguments**

M,                    numeric matrix  
method,               normalization method for edgeR. default is TMM

**Value**

normalized matrix

**Note**

`getGoPanel`

**Examples**

```
x <- getNormalizedMatrix(mtcars)
```

---

`getOrganism`                      *getOrganism*

---

**Description**

`getOrganism`

**Usage**

`getOrganism(org)`

**Arguments**

`org,`                      `organism`

**Value**

organism name for keg

**Note**

`getOrganism`

**Examples**

```
x <- getOrganism()
```

---

`getOrganismBox`                      *getOrganismBox*

---

**Description**

Get the organism Box.

**Usage**

`getOrganismBox()`

**Value**

`selectInput`

**Note**

`getOrganismBox`  
`getOrganismBox` makes the organism box

**Examples**

```
x <- getOrganismBox()
```

---

getOrganismPathway     *getOrganismPathway*

---

**Description**

getOrganismPathway

**Usage**

```
getOrganismPathway(org)
```

**Arguments**

org,                    organism

**Value**

organism name for pathway

**Note**

getOrganismPathway

**Examples**

```
x <- getOrganismPathway()
```

---

getPCAexplained     *getPCAexplained*

---

**Description**

Creates a more detailed plot using the PCA results from the selected dataset.

**Usage**

```
getPCAexplained(datasetInput = NULL, cols = NULL, input = NULL)
```

**Arguments**

datasetInput, selected data  
cols, columns  
input, from user)

**Value**

explained plot

**Examples**

```
x <- getPcaExplained()
```

---

getPCselection      *getPCselection*

---

**Description**

Generates the PC selection number to be used within DEBrowser.

**Usage**

```
getPCselection(num = 1, xy = "x")
```

**Arguments**

num, PC selection number  
xy, x or y coordinate

**Value**

PC selection for PCA analysis

**Note**

getPCselection

**Examples**

```
x <- getPCselection()
```

---

<code>getProgramTitle</code>	<i>getProgramTitle</i>
------------------------------	------------------------

---

**Description**

Generates the title of the program to be displayed within DEBrowser. If it is called in a program, the program title will be hidden

**Usage**

```
getProgramTitle(session = NULL)
```

**Arguments**

session, session var

**Value**

program title

**Note**

```
getProgramTitle
```

**Examples**

```
title<-getProgramTitle()
```

---

<code>getQCLeftMenu</code>	<i>getQCLeftMenu</i>
----------------------------	----------------------

---

**Description**

Generates the left menu to be used for QC plots within the DEBrowser.

**Usage**

```
getQCLeftMenu()
```

**Value**

QC left menu

**Note**

```
getQCLeftMenu
```

**Examples**

```
x <- getQCLeftMenu()
```

---

*getQCPanel*

*getQCPanel*

---

**Description**

Gathers the conditional panel for QC plots

**Usage**

```
getQCPanel(input = NULL)
```

**Arguments**

input, user input

**Value**

the panel for QC plots

**Note**

*getQCSection*

**Examples**

```
x <- getQCPanel()
```

---

*getQCPlots*

*getQCPlots*

---

**Description**

Gathers the plot data to be displayed within the quality checks panel.

**Usage**

```
getQCPlots(dataset = NULL, input = NULL, metadata = NULL,  
inputQCPlot = NULL)
```

**Arguments**

dataset,           the dataset to use  
input,             user input  
metadata,         coupled samples and conditions  
inputQCPlot,     input QC params

**Value**

the panel for QC plots

**Note**

getQCPlots

**Examples**

```
x <- getQCPlots()
```

---

getQCReplot

*getQCReplot*

---

**Description**

Prepares QCplots for comparisons and others

**Usage**

```
getQCReplot(cols = NULL, conds = NULL, datasetInput = NULL,  

input = NULL, inputQCPlot = NULL)
```

**Arguments**

cols,             the dataset to use  
conds,            the dataset to use  
datasetInput,    the dataset to use  
input,            user input  
inputQCPlot,     input QC params

**Value**

the panel for QC plots

**Note**

getQCReplot

**Examples**

```
x <- getQCReplot()
```

---

getSampleNames	<i>getSampleNames</i>
----------------	-----------------------

---

**Description**

Prepares initial samples to fill condition boxes. it reads the sample names from the data and splits into two.

**Usage**

```
getSampleNames(cnames = NULL, part = 1)
```

**Arguments**

cnames,	sample names in the header of a dataset
part,	c(1,2). 1=first half and 2= second half

**Value**

sample names.

**Examples**

```
x<-getSampleNames()
```

---

getSamples	<i>getSamples</i>
------------	-------------------

---

**Description**

Gathers the sample names to be used within DEBrowser.

**Usage**

```
getSamples(cnames = NULL, index = 2)
```

**Arguments**

cnames,	names of the samples
index,	starting column in a tab separated file

**Value**

choices

**Examples**

```
x <- getSamples()
```

---

*getSearchData*

*getSearchData*

---

**Description**

search the geneset in the tables and return it

**Usage**

```
getSearchData(dat = NULL, input = NULL)
```

**Arguments**

dat,                    table data  
input,                 input params

**Value**

data

**Examples**

```
x <- getSearchData()
```

---

*getSelectedDatasetInput*

*getSelectedDatasetInput*

---

**Description**

Gathers the user selected dataset output to be displayed.

**Usage**

```
getSelectedDatasetInput(rdata = NULL, getSelected = NULL,  
  getMostVaried = NULL, mergedComparison = NULL, input = NULL)
```

**Arguments**

rdata,            filtered dataset  
getSelected,     selected data  
getMostVaried,   most varied data  
mergedComparison, merged comparison data  
input,            input parameters

**Value**

data

**Examples**

```
x <- getSelectedDatasetInput()
```

---

*getSelHeat*                      *getSelHeat*

---

**Description**

heatmap selection functionality

**Usage**

```
getSelHeat(init_data = NULL, heatdat = NULL, count = NULL)
```

**Arguments**

init\_data,        initial data  
heatdat,          heatData  
count,            selected gene count

**Value**

plot

**Examples**

```
x <- getSelHeat()
```

---

<code>getStartPlotsMsg</code>	<i>getStartPlotsMsg</i>
-------------------------------	-------------------------

---

**Description**

Generates and displays the starting message to be shown once the user has first seen the main plots page within DEBrowser.

**Usage**

```
getStartPlotsMsg()
```

**Value**

return start plot msg

**Note**

```
getStartPlotsMsg
```

**Examples**

```
x <- getStartPlotsMsg()
```

---

<code>getStartupMsg</code>	<i>getStartupMsg</i>
----------------------------	----------------------

---

**Description**

Generates and displays the starting message within DEBrowser.

**Usage**

```
getStartupMsg()
```

**Value**

return startup msg

**Note**

```
getStartupMsg
```

**Examples**

```
x <- getStartupMsg()
```

---

getTableStyle	<i>getTableStyle</i>
---------------	----------------------

---

**Description**

User defined selection that selects the style of table to display within the DEBrowser.

**Usage**

```
getTableStyle(dat = NULL, input = NULL, padj = c("padj"),  
             foldChange = c("foldChange"))
```

**Arguments**

dat,	dataset
input,	input params
padj,	the name of the padj value column in the dataset
foldChange,	the name of the foldChange column in the dataset

**Note**

getTableStyle

**Examples**

```
x <- getTableStyle()
```

---

getToolTipText	<i>getToolTipText</i>
----------------	-----------------------

---

**Description**

Prepares tooltip text for the second scatter plot in the plots page

**Usage**

```
getToolTipText(dat = NULL)
```

**Arguments**

dat,	data need to have following columns; padj, average, cond1 and cond2 values, log10padj, foldChange
------	---------------------------------------------------------------------------------------------------

**Value**

tooltip text

**Examples**

```
x <- getToolTipText()
```

---

getUp	<i>getUp get up regulated data</i>
-------	------------------------------------

---

**Description**

getUp get up regulated data

**Usage**

```
getUp(filt_data = NULL)
```

**Arguments**

filt\_data,      filt\_data

**Value**

data

**Examples**

```
x <- getUp()
```

---

getUpDown	<i>getUpDown get up+down regulated data</i>
-----------	---------------------------------------------

---

**Description**

getUpDown get up+down regulated data

**Usage**

```
getUpDown(filt_data = NULL)
```

**Arguments**

filt\_data,      filt\_data

**Value**

data

**Examples**

```
x <- getUpDown()
```

---

hideObj	<i>hideObj</i>
---------	----------------

---

**Description**

Hides a shiny object.

**Usage**

```
hideObj(btns = NULL)
```

**Arguments**

btns,           hide group of objects with shinyjs

**Examples**

```
x <- hideObj()
```

---

installpack	<i>installpack</i>
-------------	--------------------

---

**Description**

install packages if they don't exist display.

**Usage**

```
installpack(package_name = NULL)
```

**Arguments**

package\_name,   package name to be installed

**Note**

installpack

**Examples**

```
x <- installpack()
```

---

link_brush	<i>link_brush</i>
------------	-------------------

---

**Description**

Modified linked brush object. A link brush function modified to be able to create non-reactive linked brush object for ggvis plots

**Usage**

```
link_brush()
```

**Value**

A list with components:

input	A function that takes a visualisation as an argument and adds an input brush to that plot
selected	A reactive providing a logical vector that describes which points are under the brush

**Note**

link\_brush is very new and is likely to change substantially

**Examples**

```
1b <- link_brush()
```

---

load_data	<i>load_data.</i>
-----------	-------------------

---

**Description**

Loads user selected data to be used for DESeq

**Usage**

```
load_data(input = NULL, session = NULL)
```

**Arguments**

input,	input values
session,	if data is going to be loaded from json

**Value**

data

**Examples**

```
x<-load_data ()
```

---

logSliderJScore	<i>logSliderJScore</i>
-----------------	------------------------

---

**Description**

Generates the log based slider to be used by the user within DEBrowser.

**Usage**

```
logSliderJScore(slidername = NULL)
```

**Arguments**

slidername, id of the slider

**Value**

returns the slider values in log10 scale

**Note**

logSliderJScore

**Examples**

```
x <- logSliderJScore()
```

mainScatter

*mainScatter*

---

**Description**

Creates the main scatter plot to be displayed within the main panel.

**Usage**

```
mainScatter(dat = NULL, lb = NULL, data_tooltip = NULL, x = NULL,  
            y = NULL, domains = NULL, colors = NULL)
```

**Arguments**

dat,	dataframe that has log2FoldChange and log10padj values
lb,	the linked brush
data_tooltip,	tooltip specific to this plot
x,	the name of the x coordinate
y,	the name of the y coordinate
domains,	the domains to be colored
colors,	colors for each domain

**Value**

volcano plot

**Examples**

```
x <- mainScatter()
```

---

MAPlot*MAPlot*

---

**Description**

Prepares MA plot to be used within the main plot panel.

**Usage**

```
MAPlot(dat = NULL, lb = NULL, data_tooltip = NULL, domains = NULL,  
        colors = NULL)
```

**Arguments**

`dat`, dataframe that has `log2FoldChange` and `log10padj` values  
`lb`, the linked brush  
`data_tooltip`, tooltip specific to this plot  
`domains`, the domains to be colored  
`colors`, colors for each domain

**Value**

MA plot

**Examples**

```
x <- MAPlot()
```

---

MAZoom

*MAZoom*

---

**Description**

Prepares the zoomed in version of the MA plot to be used within the main panel.

**Usage**

```
MAZoom(dat = NULL, data_tooltip = NULL, domains = NULL, colors = NULL)
```

**Arguments**

`dat`, dataframe that has `log2FoldChange` and `log10padj` values  
`data_tooltip`, tooltip specific to this plot  
`domains`, the domains to be colored  
`colors`, colors for each domain

**Value**

zoomed MA plot

**Examples**

```
x <- MAZoom()
```

panel.cor

*panel.cor*

---

**Description**

Prepares the correlations for the all2all plot.

**Usage**

```
panel.cor(x, y, prefix = "rho=", cex.cor = 2, ...)
```

**Arguments**

x,	numeric vector x
y,	numeric vector y
prefix,	prefix for the text
cex.cor,	correlation font size
...,	additional parameters

**Value**

all2all correlation plots

**Examples**

```
panel.cor(c(1,2,3), c(4,5,6))
```

---

panel.hist

*panel.hist*

---

**Description**

Prepares the histogram for the all2all plot.

**Usage**

```
panel.hist(x, ...)
```

**Arguments**

x,	a vector of values for which the histogram is desired
...,	any additional params

**Value**

all2all histogram plots

**Examples**

```
panel.hist(1)
```

---

*plot\_pca*

*plot\_pca*

---

**Description**

Plots the PCA results for the selected dataset.

**Usage**

```
plot_pca(x = NULL, pcx = 1, pcy = 2, explained = NULL,  
         metadata = NULL, color = NULL, shape = NULL, size = NULL,  
         factors = NULL)
```

**Arguments**

<i>x</i> ,	dataframe with data
<i>pcx</i> ,	x axis label
<i>pcy</i> ,	y axis label
<i>explained</i> ,	additional axis data
<i>metadata</i> ,	additional data
<i>color</i> ,	color for plot
<i>shape</i> ,	shape for plot
<i>size</i> ,	size of the plot
<i>factors</i> ,	factors of the plot

**Value**

pca list

**Examples**

```
load(system.file("extdata", "demo", "demodata.Rda",
  package="debrowser"))
pca_data<-run_pca(getNormalizedMatrix(
  demodata[rowSums(demodata[,2:7])>10,2:7]))
metadata<-cbind(colnames(demodata[,2:7]),
  c(rep("Cond1",3), rep("Cond2",3)))
colnames(metadata)<-c("samples", "conditions")

a <- plot_pca(pca_data$PCs, explained = pca_data$explained,
  metadata = metadata, color = "samples",
  size = 5, shape = "conditions",
  factors = c("samples", "conditions"))
```

---

```
prepDataContainer      prepDataContainer
```

---

**Description**

Prepares the data container that stores values used within DESeq.

**Usage**

```
prepDataContainer(data = NULL, counter = NULL, input = NULL,
  session = NULL)
```

**Arguments**

<code>data</code> ,	loaded dataset
<code>counter</code> ,	the number of comparisons
<code>input</code> ,	input parameters
<code>session</code> ,	session var

**Value**

data

**Examples**

```
x <- prepDataContainer()
```

---

prepDataForQC	<i>prepDataForQC</i>
---------------	----------------------

---

**Description**

Prepares selected data for QC plots.

**Usage**

```
prepDataForQC(dataset = NULL)
```

**Arguments**

dataset,           loaded dataset

**Value**

data

**Examples**

```
x <- prepDataForQC()
```

---

prepDESeqOutput	<i>prepDESeqOutput</i>
-----------------	------------------------

---

**Description**

Prepares the output data from DESeq to be used within DEBrowser

**Usage**

```
prepDESeqOutput(data = NULL, cols = NULL, conds = NULL,  
inputconds = NULL, i = NULL)
```

**Arguments**

data,           loaded dataset  
cols,           columns  
conds,          conds  
inputconds,    inputconds  
i,              selected comparison number

**Value**

data

**Examples**

```
x <- prepDESeqOutput()
```

---

push

*push*

---

**Description**

Push an object to the list.

**Usage**

```
push(1, ...)
```

**Arguments**

1,                   that are going to push to the list  
...,                 list object

**Value**

combined list

**Examples**

```
mylist <- list()  
newlist <- push ( 1, mylist )
```

---

removeCols

*removeCols*

---

**Description**

remove unnecessary columns

**Usage**

```
removeCols(cols = NULL, dat = NULL)
```

**Arguments**

*cols*, columns that are going to be removed from data frame  
*dat*, data

**Value**

data

**Examples**

```
x <- removeCols()
```

---

<i>round_vals</i>	<i>round_vals</i>
-------------------	-------------------

---

**Description**

Plot PCA results.

**Usage**

```
round_vals(1)
```

**Arguments**

1, the value

**Value**

round value

**Examples**

```
x<-round_vals(5.1323223)
```

---

runDESeq

*runDESeq*

---

**Description**

Run DESeq2 algorithm on the selected conditions. Output is to be used for the interactive display.

**Usage**

```
runDESeq(data, columns, conds, fitType = c("parametric", "local", "mean"),
  non_expressed_cutoff = 10)
```

**Arguments**

`data`, A matrix that includes all the expression raw counts, rownames has to be the gene, isoform or region names/IDs

`columns`, is a vector that includes the columns that are going to be analyzed. These columns has to match with the given data.

`conds`, experimental conditions. The order has to match with the column order

`fitType`, DESeq2 fitType, it can be 'parametric', 'local', 'mean'.

`non_expressed_cutoff`, to remove unexpressed regions/genes/isoforms this cutoff is used

**Value**

deseq2 results

**Examples**

```
x <- runDESeq(data<-NULL, columns<-c())
```

---

runHeatmap

*runHeatmap*

---

**Description**

Creates a heatmap based on the user selected parameters within shiny.

**Usage**

```
runHeatmap(data, title = "Title", dend = "both", names = FALSE,
  clustering_method = c("ward.D2", "complete", "single", "average",
  "mcquitty", "median", "centroid"), distance_method = c("euclidean", "cor",
  "maximum", "manhattan", "canberra", "binary", "minkowski"))
```

**Arguments**

data, a matrix that includes expression values  
 title, title of the heatmap  
 dend, dendrogram  
 names, a flag to show the rownames  
 clustering\_method = c('complete', 'ward.D2', 'single', 'average', 'mcquitty', 'median', 'centroid')  
 distance\_method = c('cor', 'euclidean', 'maximum', 'manhattan', 'canberra', 'binary', 'minkowski')

**Value**

heatmap.2 plot

**Examples**

```
x <- runHeatmap(mtcars)
```

---

run\_pca

*run\_pca*

---

**Description**

Runs PCA on the selected dataset.

**Usage**

```
run_pca(x = NULL, retx = TRUE, center = TRUE, scale = TRUE)
```

**Arguments**

x, dataframe with experiment data  
 retx, specifies if the data should be returned  
 center, center the PCA (Boolean)  
 scale, scale the PCA (Boolean)

**Value**

pca list

**Examples**

```

load(system.file("extdata", "demo", "demodata.Rda",
  package="debrowser"))
pca_data <- run_pca(getNormalizedMatrix(
  demodata[rowSums(demodata[, 2:7]) > 10, 2:7]))

```

---

 saveQCPlot

*saveQCPlot*

---

**Description**

Saves the current QC plot selection to the users local disk.

**Usage**

```
saveQCPlot(filename = NULL, input = NULL, datasetInput = NULL,
            cols = NULL, conds = NULL, inputQCPlot = NULL)
```

**Arguments**

filename,	filename
input,	input params
datasetInput,	dataset
cols,	selected columns
conds,	selected conditions
inputQCPlot,	clustering method and distance method

**Note**

saveQCPlot

**Examples**

```
saveQCPlot()
```

---

 scatterZoom

*scatterZoom*

---

**Description**

Displays the zoomed in version of the plot to be viewed within the main panel.

**Usage**

```
scatterZoom(dat = NULL, data_tooltip = NULL, x = NULL, y = NULL,
            domains = NULL, colors = NULL)
```

**Arguments**

dat,	dataframe that has log2FoldChange and log10padj values
data_tooltip,	tooltip specific to this plot
x,	the name of the x coordinate
y,	the name of the y coordinate
domains,	the domains to be colored
colors,	colors for each domain

**Value**

zoomed scatter plot

**Examples**

```
x <- scatterZoom()
```

---

selectConditions	<i>selectConditions</i>
------------------	-------------------------

---

**Description**

Selects user input conditions, multiple if present, to be used in DESeq.

**Usage**

```
selectConditions(Dataset = NULL, choicecounter, input = NULL)
```

**Arguments**

Dataset,	used dataset
choicecounter,	
	total number of comparisons
input,	input params

**Value**

the panel for go plots;

**Note**

selectConditions

**Examples**

```
x<- selectConditions()
```

---

setFilterParams	<i>setFilterParams</i>
-----------------	------------------------

---

**Description**

It sets the filter parameters

**Usage**

```
setFilterParams(session = NULL, input = NULL)
```

**Arguments**

session,	session variable
input,	input parameters

**Examples**

```
x <- setFilterParams()
```

---

showObj	<i>showObj</i>
---------	----------------

---

**Description**

Displays a shiny object.

**Usage**

```
showObj(btns = NULL)
```

**Arguments**

btns,	show group of objects with shinyjs
-------	------------------------------------

**Examples**

```
x <- showObj()
```

---

startDEBrowser	<i>startDEBrowser</i>
----------------	-----------------------

---

**Description**

Starts the DEBrowser to be able to run interactively.

**Usage**

```
startDEBrowser()
```

**Value**

the app

**Note**

```
startDEBrowser
```

**Examples**

```
startDEBrowser()
```

---

textareaInput	<i>textareaInput</i>
---------------	----------------------

---

**Description**

Generates a text area input to be used for gene selection within the DEBrowser.

**Usage**

```
textareaInput(id, label, value, rows = 20, cols = 35,  
  class = "form-control")
```

**Arguments**

id,	id of the control
label,	label of the control
value,	initial value
rows,	the # of rows
cols,	the # of cols
class,	css class

**Examples**

```
x <- textareaInput("genesetarea", "Gene Set",
  "Fgf21", rows = 5, cols = 35)
```

---

togglePanels

*togglePanels*

---

**Description**

User defined toggle to display which panels are to be shown within DEBrower.

**Usage**

```
togglePanels(num = NULL, nums = NULL, session = NULL)
```

**Arguments**

num,	selected panel
nums,	all panels
session,	session info

**Note**

```
togglePanels
```

**Examples**

```
x <- togglePanels()
```

---

volcanoPlot

*volcanoPlot*

---

**Description**

Prepares volcano plot to be used within the DEBrower.

**Usage**

```
volcanoPlot(dat = NULL, lb = NULL, data_tooltip = NULL, domains = NULL,
  colors = NULL)
```

**Arguments**

dat,                dataframe that has log2FoldChange and log10padj values  
lb,                 the linked brush  
data\_tooltip,     tooltip specific to this plot  
domains,          the domains to be colored  
colors,            colors for each domain

**Value**

volcano plot

**Examples**

```
x <- volcanoPlot()
```

---

volcanoZoom

*volcanoZoom*

---

**Description**

Prepares the zoomed in version of the volcano plot to be used within the Debrowser.

**Usage**

```
volcanoZoom(dat = NULL, data_tooltip = NULL, domains = NULL,  
            colors = NULL)
```

**Arguments**

dat,                dataframe that has log2FoldChange and log10padj values  
data\_tooltip,     tooltip specific to this plot  
domains,          the domains to be colored  
colors,            colors for each domain

**Value**

zoomed volcano plot

**Examples**

```
x <- volcanoZoom()
```
