

Package ‘Affyhgu133Plus2Expr’

October 4, 2014

Type Package

Title Affyhgu133Plus2Expr (GPL570) Expression Data Package

Version 1.0.0

Date 2014-2-13

Author Zhicheng Ji, Hongkai Ji

Maintainer Zhicheng Ji <zji4@jhu.edu>

Description Contains pre-built human (GPL570) database of gene expression profiles. The gene expression data was downloaded from NCBI GEO and preprocessed and normalized consistently. The biological context of each sample was recorded and manually verified based on the sample description in GEO.

License GPL (>=2)

Depends R (>= 2.10)

Affyhgu133Plus2Expr-package

Affymetrix Human Genome U133 Plus 2.0 Array (GPL570) Expression Data Package

Description

Contains gene expression profiles from Affymetrix Human Genome U133 Plus 2.0 Array (GPL570). This package is primarily designed for GSCA (Gene Set Context Analysis). All gene expression data are downloaded from NCBI GEO. Gene expression data were preprocessed and normalized consistently using fRMA. Gene expression values are further standardized using gene expression barcode approach. The biological context of each sample was recorded and manually verified based on the sample description in GEO. Gene expression profiles are stored as vectors in separate .rda files (with xz compression).

Details

Package: Affyhgu133Plus2Expr
Type: Package
Version: 0.99.0
Date: 2014-2-6
License: GPL 2.0

Affyhg133Plus2Expr *Data of human gene expression profiles from the Affymetrix Human Genome U133 Plus 2.0 Array (GPL570).*

Description

The data set contains 5153 human profiles on 19944 genes downloaded from NCBI GEO. Gene expression data were preprocessed and normalized consistently using fRMA. Gene expression values are further standardized using gene expression barcode approach. The biological context of each sample was recorded and manually verified based on the sample description in GEO. Expression profiles are stored in separate .rda files (with xz compression).

Details

This data package contains 19944 .rda files with xz compression. Each .rda file contains the gene expression vector of length 5153 for the gene ID represented by its file name, and the vector consists of 5153 samples measurements from NCBI GEO obtained using the GPL570 platform. Gene expression data were preprocessed and normalized consistently using fRMA. Gene expression values were further standardized using gene expression barcode approach. Probesets that corresponds to the same gene are averaged, so that each gene uniquely matches to one row in the database. The biological context of each sample was also recorded and manually verified based on the sample description in GEO. The sample id, sample type, and experiment id for each sample in the gene expression compendium are also included in this data package.

Affyhg133Plus2Exprtab

Reference table for Affyhg133Plus2Expr gene expression compendium

Description

Contains the sample id, sample type, and experiment id for each sample in the Affymetrix Human hgu133a Array (GPL570) gene expression compendium.

Usage

```
data(Affyhg133Plus2Exprtab)
```

Format

A data frame with 5153 observations on the following 3 variables.

SampleID a character vector

ExperimentID a character vector

SampleType a character vector

Details

SampleID is a GSM ID that NCBI GEO uses to as a sample identifier. ExperimentID is a GEO ID that NCBI GEO uses to identify an experiment. SampleType denotes the cell type or tissue and whether the sample is given a specific treatment or in a specific condition.
