

MiPP

April 19, 2010

colon *Gene expression data for colon cancer*

Description

This data set consists of gene expression of colon cancer study.

Usage

```
data(colon)
```

Format

A matrix containing 2000 probe sets and 2 classes (T, F)

Source

Alon, U., Barkai, N., Notterman, D.A., Gish, K., Ybarra, S., Mack, D., Levine, A.J. (1999). Broad Patterns of Gene Expression Revealed by Clustering Analysis of Tumor and Normal Colon Tissues probed by Oligonucleotide Arrays, PNAS, 96(12), 6745–6750.

cv.mipp.rule *Fitting cross-validation MiPP*

Description

Fits cross-validation MiPP

get.mipp.lda *Fitting LDA to compute MiPP*

Description

Fits LDA to compute MiPP

get.mipp.logistic *Fitting logistic model to compute MiPP*

Description

Fits logistic model to compute MiPP

get.mipp.qda *Fitting QDA to compute MiPP*

Description

Fits QDA to compute MiPP

get.mipp *Choosing a rule*

Description

Choose a rule to compute MiPP

get.mipp.svm.linear *Fitting SVM (linear) to compute MiPP*

Description

Fits SVM (linear) to compute MiPP

get.mipp.svm.rbf *Fitting SVM (RBF) to compute MiPP*

Description

Fits SVM (RBF) to compute MiPP

leuk1

Gene expression data for leukemia

Description

This data set consists of gene expression of leukemia study.

Usage

```
data(leukemia)
```

Format

A matrix containing 6817 probe sets and 38 samples (2 classes: AML, ALL)

Source

Golub, T.R., Slonim, D.K., Tamayo, P., Huard, C., Gaasenbeek, M., Mesirov, P., Coller, H., Loh, M.L., Downing, J.R., Caliguri, M.A., Bloomfield, C.D., and Lander, E.S. (1999) Molecular classification of cancer: class discovery and class prediction by gene expression monitoring. *Science*, 286, 531-537.

leuk2

Gene expression data for leukemia

Description

This data set consists of gene expression of leukemia study.

Usage

```
data(leukemia)
```

Format

A matrix containing 6817 probe sets and 34 samples (2 classes: AML, ALL)

Source

Golub, T.R., Slonim, D.K., Tamayo, P., Huard, C., Gaasenbeek, M., Mesirov, P., Coller, H., Loh, M.L., Downing, J.R., Caliguri, M.A., Bloomfield, C.D., and Lander, E.S. (1999) Molecular classification of cancer: class discovery and class prediction by gene expression monitoring. *Science*, 286, 531-537.

leukemia

Gene expression data for leukemia

Description

This data set consists of gene expression of leukemia study.

Usage

```
data(leukemia)
```

Format

A matrix containing 6817 probe sets and 2 classes (AML, ALL)

Source

Golub, T.R., Slonim, D.K., Tamayo, P., Huard, C., Gaasenbeek, M., Mesirov, P., Coller, H., Loh, M.L., Downing, J.R., Caliguri, M.A., Bloomfield, C.D., and Lander, E.S. (1999) Molecular classification of cancer: class discovery and class prediction by gene expression monitoring. *Science*, 286, 531-537.

linearkernel.decision.function

SVM (linear) kernel to compute MiPP

Description

SVM (linear) kernel to compute MiPP

mipp.preproc

Preprocessing

Description

Performs IQR normalization, thesholding, and log2-transformation

Usage

```
mipp.preproc(x, data.type = "MAS5")
```

Arguments

x	data
data.type	data type is MAS5, MAS4, or dChip

See Also[mipp](#)**Examples**

```
library(MiPP)

data(colon)
colon.nor <- mipp.preproc(colon)
```

mipp

*MiPP-based Classification***Description**

Finds optimal sets of genes for classification

Usage

```
mipp(x, y, x.test = NULL, y.test = NULL, probe.ID = NULL,
     rule = "lda", method.cut = "t.test", percent.cut = 0.01,
     model.sMiPP.margin = 0.01, min.sMiPP = 0.85, n.drops = 2,
     n.fold = 5, p.test = 1/3, n.split = 20,
     n.split.eval = 100)
```

Arguments

x	data matrix
y	class vector
x.test	test data matrix if available
y.test	test class vector if available
probe.ID	probe set IDs; if NULL, row numbers are assigned.
rule	classification rule: "lda","qda","logistic","svmlin","svmrbf"; the default is "lda".
method.cut	method for pre-selection; t-test is available.
percent.cut	proportion of pre-selected genes; the default is 0.01.
model.sMiPP.margin	smallest set of genes s.t. sMiPP <= (max sMiPP-model.sMiPP.margin); the default is 0.01.
min.sMiPP	Adding genes stops if max sMiPP is at least min.sMiPP; the default is 0.85.
n.drops	Adding genes stops if sMiPP decreases (n.drops) times, in addition to min.sMiPP criterion.; the default is 2.
n.fold	number of folds; default is 5.
p.test	partition percent of train and test samples when test samples are not available; the default is 1/3 for test set.
n.split	number of splits; the default is 20.
n.split.eval	numbr of splits for evalutation; the default is 100.

Value

model candidate genes (for each split if no indep set is available)
 model.eval Optimal sets of genes for each split when no indep set is available

Examples

```
#####
#Example 1: When an independent test set is available

data(leukemia)

#Normalize combined data
leukemia <- cbind(leuk1, leuk2)
leukemia <- mipp.preproc(leukemia, data.type="MAS4")

#Train set
x.train <- leukemia[,1:38]
y.train <- factor(c(rep("ALL",27), rep("AML",11)))

#Test set
x.test <- leukemia[,39:72]
y.test <- factor(c(rep("ALL",20), rep("AML",14)))

#Compute MiPP
out <- mipp(x=x.train, y=y.train, x.test=x.test, y.test=y.test, probe.ID = 1:nrow(x.train))

#Print candidate models
out$model

#####
#Example 2: When an independent test set is not available

data(colon)

#Normalize data
x <- mipp.preproc(colon)
y <- factor(c("T", "N", "T", "N", "T", "N", "T", "N", "T", "N",
              "T", "N", "T", "N", "T", "N", "T", "N", "T", "N",
              "T", "N", "T", "N", "T", "T", "T", "T", "T", "T",
              "T", "T", "T", "T", "T", "T", "T", "T", "N", "T",
```

```

"T", "N", "N", "T", "T", "T", "T", "N", "T", "N",
"N", "T", "T", "N", "N", "T", "T", "T", "T", "N",
"T", "N"))

#Deleting contaminated chips
x <- x[,-c(51,55,45,49,56)]
y <- y[ -c(51,55,45,49,56)]

#Compute MiPP
out <- mipp(x=x, y=y, probe.ID = 1:nrow(x), n.fold=5, p.test=1/3, n.split=5, n.split.eval
percent.cut= 0.1, rule="lda")

#Print candidate models for each split
out$model

#Print optimal models and independent evaluation for each split
out$model.eval

```

mipp.rule

Computing MiPP

Description

Computes MiPP

mipp.seq

MiPP-based Classification

Description

sequentially finds optimal sets of genes for classification

Usage

```

mipp.seq(x, y, x.test = NULL, y.test = NULL, probe.ID = NULL,
rule = "lda", method.cut = "t.test", percent.cut = 0.01,
model.sMiPP.margin = 0.01, min.sMiPP = 0.85, n.drops = 2,
n.fold = 5, p.test = 1/3, n.split = 20, n.split.eval = 100,
n.seq=3, cutoff.sMiPP=0.7, remove.gene.each.model="all")

```

Arguments

x	data matrix
y	class vector
x.test	test data matrix if available
y.test	test class vector if available
probe.ID	probe set IDs; if NULL, row numbers are assigned.

```

rule          classification rule: "lda","qda","logistic","svmlin","svmrbf"; the default is "lda".
method.cut    method for pre-selection; t-test is available.
percent.cut   proportion of pre-selected genes; the default is 0.01.
model.sMiPP.margin
              smallest set of genes s.t. sMiPP <= (max sMiPP-model.sMiPP.margin); the default is 0.01.
min.sMiPP    Adding genes stops if max sMiPP is at least min.sMiPP; the default is 0.85.
n.drops      Adding genes stops if sMiPP decreases (n.drops) times, in addition to min.sMiPP criterion.; the default is 2.
n.fold       number of folds; default is 5.
p.test       partition percent of train and test samples when test samples are not available; the default is 1/3 for test set.
n.split      number of splits; the default is 20.
n.split.eval numbr of splits for evaluation; the default is 100.
n.seq        Number of sequential gene model selection; the default is 3.
cutoff.sMiPP Cutoff point of 5 percent sMiPP to select gene models
remove.gene.each.model
              Re-run after removing all genes in the selected models if "all" and the first gene for each of the selected models if "first"

```

Value

```

model        candiadate genes (for each split if no indep set is available)
model.eval   Optimal sets of genes for each split when no indep set is available
genes.selected
              a list of genes selected by sequential selection

```
