

MotIV

April 20, 2011

`alignments-class` *Class "alignments"*

Description

This object contains the alignments found by a MotIV analysis.

Objects from the Class

Objects can be created by calls of the form `new("alignments", TF, evalue, sequence, match, strand)`.

Slots

TF Object of class "TF"

evalue The e-value of the alignment.

sequence The input sequence aligned.

match The TF sequence which has been matched.

strand The strand of the alignment.

Eloi Mercier <<eloi.mercier@ircm.qc.ca>>

See Also

`motiv`, `matches`, `transcriptionFactor`

`combine`*Combine Motifs*

Description

This function combines motifs according to a set of filters.

Usage

```
## S4 method for signature 'motiv, filters':  
combine(x, y, name=NULL, exact=TRUE, verbose=TRUE)
```

Arguments

| | |
|----------------------|--|
| <code>x</code> | An object of class <code>motiv</code> . |
| <code>y</code> | A filter or a set of filter. |
| <code>name</code> | Name(s) to be given for similar motifs. |
| <code>verbose</code> | If <code>FALSE</code> , no output will be print. |
| <code>exact</code> | If <code>TRUE</code> , search only for perfect name match. |

Details

This function is used to consider some motifs as a unique motif or similar motifs.

Many `filters` could be pass in argument separated by coma. They will be considered independently (coma is considered as OR).

If a name or a vector of name is provided, it will be used to assign new name for similar motif to the corresponding filter. Else, a generic name is used.

Value

A `motiv` object.

```

exportAsRangedData *Export MotIV Results*

Description

Export your

Usage

```
exportAsRangedData(x, y, correction=TRUE)
```

Arguments

| | |
|------------|--|
| x | An object of class <code>motiv</code> . |
| y | The <code>rGADEM</code> type object associated with the <code>motiv</code> object. |
| correction | If <code>TRUE</code> , corrects the position according to the alignment. |

Details

Use this function to export the results into a `RangedData` object.

Value

An object of type `RangedData`.

```

```
exportAsTransfacFile
```

Write Transfac Files

Description

Export an object of class `motiv` as a Transfac file type.

Usage

```
## S4 method for signature 'motiv':
exportAsTransfacFile(x, file)
## S4 method for signature 'list':
exportAsTransfacFile(x, file)
```

Arguments

| | |
|-------------------|---|
| <code>x</code> | An object of class <code>motiv</code> to be export. |
| <code>file</code> | A character string naming a file. |

Details

This function is made to provide standard output file used by STAMP. It take an object of class `motiv` and write two files named `*_matched.txt` and `*_match_pairs.txt` containing alignments and identified PWMs.

For more information about the Transfac file format, please refere to <http://www.benoslab.pitt.edu/stamp/help.html>.

| | |
|--------------|-----------------------|
| filter-class | <i>Class "filter"</i> |
|--------------|-----------------------|

Description

This object information to be apply as filter.

Details

This class `filter` is used to selected `motif` objects according the filter's arguments.

Objects from the Class

Objects can be created by calls of the form `new("filter", name, tfname, top, evaluateMax, lengthMax, valid)`.

Slots

- name** A name or a list of names.
- tfname** A transcription factor name or a list of TF names.
- evaluateMax** An e-value between 0 and 1.
- top** Defined the depth of the filter.
- lengthMax** The maximum motif length.
- valid** The alignment that should be considered as valid.

| filter | <i>Filter Motifs</i> |
|--------|----------------------|

Description

This function selects motifs according to a set of filters.

Usage

```
## S4 method for signature 'motiv, filters':  
filter(x, f, exact=FALSE, verbose=TRUE)
```

Arguments

| | |
|---------|--|
| x | An object of class <code>motiv</code> . |
| f | A filter or a set of filter for <code>motiv</code> object. |
| verbose | If <code>FALSE</code> , no output will be print. |
| exact | If <code>TRUE</code> , search only for perfect name match. |

Details

This function is used to select motifs that correspond to the filters.

Many `filter` could be pass in argument separated by coma. They will be considered independently.

Value

A `motiv` object.

```

generateDBScores *Database Scores Functions*

Description

This functions are used to generate scores of a PWM database.

Usage

```
generateDBScores(inputDB, cc="PCC", align="SWU", nRand=1000, go=1, ge=0.5)
readDBScores(file)
writeDBScores(x, file)
```

Arguments

| | |
|---------|---|
| inputDB | A list of PWM corresponding to the database. |
| cc | The metric name to be used : |
| align | The Alignment method to be used. |
| go | Gap open penalty. |
| ge | Gap extension penalty. |
| nRand | The number of random PWM to be generated. The more higher it is, the more accurate score will be. |
| file | A character string naming a file. |
| x | A numeric matrix corresponding to a score. |

Details

The score reflects the biases of the database. It is used to compute more precisely e-value alignments.

`generateDBScores` : Based on database properties (suchs as length, zero rate, invariant columns), `nRand` matrix are generated. A score is calculated for each matrix length with the specified alignment method and metric.

The score is associated to a database and a alignment method and metric so you don't have to generate it each time you use the same database. Use the `writeDBScores` and `readDBScores` instead. `readDBScores` : Read a score file. `writeDBScores` : Write a score file.

Value

A numeric matrix. Columns correspond respectively to the first matrix length, second matrix length, variance, mean, matrix number, distance min and max.

Warning

Because of each matrix is compare to each other, computing time is exponential. You should be aware of this fact before provided a high nRand. 5000 is a good time/accuracy rate choice.

jaspar2010

*Jaspar 2010 Database***Description**

Jaspar database and Jaspar score.

Usage

```
jaspar
jaspar.scores
```

Details

Jaspar is a well-known transcription factor database. Version 2010 contents 130 non-redundant matrix of TF binding sites.

The jaspar scores have been computed with Pearson Correlation Coefficient and Smith-Waterman Ungapped alignments.

makePWM

Constructing a pwm object

Description

This function constructs an object of class `pwm` from a matrix. It checks that the matrix has correct dimensions and that columns add up to 1.0.

Usage

```
makePWM(pwm, alphabet="DNA")
```

Arguments

| | |
|-----------------------|--|
| <code>pwm</code> | Matrix representing the position weight matrix |
| <code>alphabet</code> | Character the alphabet making up the sequence. Currently, only "DNA" is supported. |

Value

An object of class `pwm`.

Author(s)

Oliver Bembom, <bembom@berkeley.edu>

Examples

```
#mFile <- system.file("Exfiles/pwm1", package="seqLogo")
#m <- read.table(mFile)
#pwm <- makePWM(m)
```

matches-class *Class "matches"*

Description

This object contains the name of the input motif and all the matches found.

Objects from the Class

Objects can be created by calls of the form `new("matches", name, aligns, similarity, valid)`.

Slots

name Motif name.

aligns Alignments found by `motifMatch`.

similarity The optional name given to the motif.

valid The alignment that should be considered as valid.

Author(s)

Eloi Mercier <<eloi.mercier@ircm.qc.ca>>

See Also

`motif`, `alignments`, `tf`

Examples

```
showClass("matches")
```

motifDistances *Clustering PWMs Computation*

Description

Set of functions to perform clustering of PWMs.

Usage

```
motifDistances(inputPWM, DBscores=jaspar.scores, cc="PCC", align="SWU", top=5, g
motifHclust(x, ...)
motifCutree(tree, k=NULL, h=NULL)
```

Arguments

```
inputPWM, DBscores, cc, align, top, go, ge
      Option for the PWMs distances computation. Refere to motifMatch.
x, ...
      Arguments to pass to the hclust function. See hclust.
tree, k, h
      Arguments to pass to the cutree function. See cutree.
```

Details

This function are made to perform motifs clustering.

The ‘motifDistances’ function computes the distances between each pair of motifs using the specified alignment.

The ‘motifHclust’ and ‘motifCutree’ functions are simple redefinition of ‘hclust’ and ‘cutree’.

Author(s)

Eloi Mercier <<eloi.mercier@ircm.qc.ca>>

Examples

```
#####Database and Scores#####
path <- system.file(package="MotIV")
jaspar <- readPWMfile(paste(path, "/extdata/jaspar2010.txt", sep=""))
jaspar.scores <- readDBScores(paste(path, "/extdata/jaspar2010_PCC_SWU.scores", sep=""))

#####Input#####
data(FOXA1_rGADEM)
motifs <- getPWM(gadem)
motifs.trimed <- trimPWMedge(motifs, threshold=1)

#####Analysis#####
foxa1.analysis.jaspar <- motifMatch(inputPWM=motifs, align="SWU", cc="PCC", database=jaspar,

#####Clustering#####
d <- motifDistances(getPWM(foxa1.analysis.jaspar))
hc <- motifHclust(d)
plot(hc)
f <- motifCutree(hc, k=2)
foxa1.combine <- combine(foxa1.analysis.jaspar, f, exact=FALSE, name=c("Group1", "Group2"))
```

`motifMatch`*Motifs Matches Analysis*

Description

Search for motifs matches corresponding to PWM.

Usage

```
motifMatch(inputPWM, database=jaspar, DBscores=jaspar.scores, cc="PCC", align=
```

Arguments

| | |
|-----------------------|---|
| <code>inputPWM</code> | A list of PWM. |
| <code>database</code> | A list of PWM corresponding to the database. |
| <code>DBscores</code> | A matrix object containing the scores associated to the database. |
| <code>cc</code> | The metric name to be used |
| <code>align</code> | The Alignment method to be used. |
| <code>top</code> | The number of identified transcription factors per motif. |
| <code>go</code> | Gap open penalty. |
| <code>ge</code> | Gap extension penalty. |

Details

For a set of PWMs given by `inputPWM`, this function realizes alignments with each motif of the database and returns the `top` best motifs. If no database is provided, the function will use `jaspar` by loading `data(jaspar2010)`. If no `DBscores` is given, `jaspar.scores` from `data(jaspar2010_scores)` will be used.

The e-value is computed according the metric name `cc` and is corrected by the `DBscores`.

Value

A `motiv` object.

Author(s)

Eloi Mercier <<eloi.mercier@ircm.qc.ca>>

occurrences

*Motifs Occurrences and Co-occurrences***Description**

Get the number of motifs occurrences and co-occurrences from a rGADEM object.

Usage

```
occurrences(gadem)
cooccurrences(x)
```

Arguments

| | |
|-------|---------------------------|
| gadem | An object of type rGADEM. |
| x | A contingency table. |

Value

occurrences returns the contingency table of the number of motifs per sequences.

This object can be put in cooccurrences to return the number of sequences where two motifs appear together.

Author(s)

Eloi Mercier <<eloi.mercier@ircm.qc.ca>>

Examples

```
data("FOXA1_rGADEM")
oc <- occurrences(gadem)
coc <- cooccurrences(oc)
coc
```

plot-methods

Plot Motiv

Description

This functions are used to visualize and validate `motiv` analysis.

Usage

```
## S4 method for signature 'motiv,ANY':
plot(x, y=NULL, main=NULL, sub=NULL, ncol=0, nrow=0, top=3, bysim=TRUE, rev=FALSE)
## S4 method for signature 'motiv,gadem':
plot(x, y, sort=FALSE, group=FALSE, main=NULL, sub=NULL, ncol=0, nrow=0, xlim=NULL)
```

Arguments

| | |
|------------|--|
| x | An object of class <code>motiv</code> . |
| y | The GADEM type object associated with the <code>motiv</code> object. |
| ncol, nrow | A numeric value giving the the number of columns and rows to plot. |
| top | A numeric value giving the number of best matches per motif to display. |
| rev | A logical value. If TRUE, print reverse motif for negatif strand. |
| main | An overall title for the plot: see <code>title</code> . |
| sub | A sub title for the plot: see <code>'title'</code> |
| type | What type of plot should be drawn. Possible values are : distribution to display the binding sites distribution within the peaks or distance to show the pairwise distance between motifs. |

| | |
|-----------------------|---|
| strand | If TRUE, distribution will be plot for both forward and reverse strand. |
| group | If TRUE, similar motifs will be grouped. |
| sort | If TRUE, motifs will be plot according their computed variance. |
| bysim | If TRUE, the 'similar' field (defined with the <code>combine</code> function) will be print instead of the original name. |
| xlim | A numeric vectors of length 2, giving the x coordinates ranges. |
| correction | If TRUE, corrects the position according to the alignment. |
| trim | A numeric value. Define the minimum information content value for which the logo letters are shown. |
| col, border, lwd, lty | Define respectively the color, the border, the line wide and the line type of both curve and histogram. See 'par'. |
| nclass | A numerical value giving the number of class for the histogram. |
| bw | the smoothing bandwidth to be used to calculate the density. See <code>density</code> . |
| cex, vcol | A numerical value giving the amount by which plotting text should be magnified relative to the default. |

Details

A single `motiv` object (usually provided by `motifMatch`) will plot the list of identified transcription factors for each motif. With `rev=TRUE`, the transcription factor logo will be print to correspond to the real alignment instead of original TF PWM.

Giving a `motiv` object and a `gadem` object with `type="distribution"` will show the motif repartition within `gadem` peaks. If `strand=TRUE`, a distinct distribution is made for forward and reverse strand.

A `var.test` is automatically made to help to distinguish centered distribution. The distribution with lowest variance is assign as "reference" distribution to compute the `var.test` statistic. With `sort=TRUE`, distribution are plot according decreasing statistic.

`type="distance"` indicates to compute and plot the distance between each pair of motif. It also provided Venn diagram that returns the proportion of common sequences per pair of motif.

The `group` argument indicates to consider similar motif as a single motif.

With `correction=TRUE` the motif position is corrected according to the alignment. It means that the `gap/"N"` contained in the alignments are removed to give a corrected start and end position.

```

readGademPWMFile *Read Gadem File*

Description

This function is use to read a gadem file containing PWM.

Usage

```
readGademPWMFile(file)
```

Arguments

file File's name.

Details

This function is made to read typically output file from Gadem (v1.2). Standard name is 'observed-PWMs.txt'.

Author(s)

Eloi Mercier <<eloi.mercier@ircm.qc.ca>>

Examples

```
#####Database and Scores#####
path <- system.file(package="MotIV")
jaspar <- readPWMfile(paste(path, "/extdata/jaspar2010.txt", sep=""))
jaspar.scores <- readDBScores(paste(path, "/extdata/jaspar2010_PCC_SWU.scores", sep=""))

#####Input#####
data(FOXA1_rGADEM)
motifs <- getPWM(gadem)
motifs.trimed <- trimPWMedge(motifs, threshold=1)
```

readPWMfile *Read Transfac File*

Description

This function is use to read standard Transfac type file.

Usage

```
readPWMfile(file)
```

Arguments

file Transfac file's name.

Details

This function is designed to read standard Transfac type file. For more information about the format, please refere to <http://mcast.sdsc.edu/doc/transfac-format.html>

Value

A list of matrix.

Author(s)

Eloi Mercier <<eloi.mercier@ircm.qc.ca>>

Examples

```
#####Database and Scores#####  
path <- system.file(package="MotIV")  
jaspar <- readPWMfile(paste(path, "/extdata/jaspar2010.txt", sep=""))  
jaspar.scores <- readDBScores(paste(path, "/extdata/jaspar2010_PCC_SWU.scores", sep=""))
```

seqLogo *Plot a sequence logo for a given position weight matrix*

Description

This function takes the 4xW position weight matrix of a DNA sequence motif and plots the corresponding sequence logo.

Usage

```
seqLogo(pwm, ic.scale=TRUE, xaxis=TRUE, yaxis=TRUE, xfontsize=15, yfontsize=15)
```

Arguments

| | | |
|-----------|---------|---|
| pwm | numeric | The 4xW position weight matrix. |
| ic.scale | logical | If TRUE, the height of each column is proportional to its information content. Otherwise, all columns have the same height. |
| xaxis | logical | If TRUE, an X-axis will be plotted. |
| yaxis | logical | If TRUE, a Y-axis will be plotted. |
| xfontsize | numeric | Font size to be used for the X-axis. |
| yfontsize | numeric | Font size to be used for the Y-axis. |
| vmargins | numeric | Vertical margins. |
| hmargins | numeric | Horizontal margins. |
| size | numeric | Graphic size. |
| trim | numeric | Only print letters with information content superior to a threshold given by trim |

Details

Within each column, the height of a given letter is proportional to its frequency at that position. If ic.scale is TRUE, the height of each column in the plot indicates the information content at that position of the motif. Otherwise, the height of all columns are identical.

Value

None.

Author(s)

Oliver Bembom, <bembom@berkeley.edu>

Examples

```
#mFile <- system.file("Exfiles/pwm1", package="seqLogo")
#m <- read.table(mFile)
#pwm <- makePWM(m)
#seqLogo(pwm)
```

setFilter

Set Motif Filter

Description

This function is use to set a motif filter.

Usage

```
setFilter(name="", tfname="", evaluateMax=1, top=10, lengthMax=100, valid=NULL)
```

Arguments

| | |
|-------------|--|
| name | A name or a list of names. |
| tfname | A transcription factor name or a list of TF names. |
| evaluateMax | An evaluate between 0 and 1. |
| top | Defines the depth of the filter. |
| lengthMax | The maximum motif length. |
| valid | The alignment that should be considered as valid. |

Value

A filter object.

Author(s)

Eloi Mercier <<eloi.mercier@ircm.qc.ca>>

See Also

filter, split, combine

Examples

```
#####Database and Scores#####
path <- system.file(package="MotIV")
jaspar <- readPWMfile(paste(path, "/extdata/jaspar2010.txt", sep=""))

foxa1.filter.combine <- combine(foxa1.filter, c(f.foxa1, f.ap1), exact=FALSE, name=c("FOX
```

split-methods

Split Motiv Object

Description

This function splits a 'motiv' object according filters.

Usage

```
## S4 method for signature 'motiv, filters':
split(x, f, exact=TRUE, drop=FALSE, verbose=TRUE, ...)
```

Arguments

| | |
|---------|---|
| x | An object of class <code>motiv</code> (usually provided by <code>motifMatch</code>). |
| f | A filter or a set of filter for <code>motiv</code> object. |
| drop | If <code>TRUE</code> , no match motifs will be dropped. |
| verbose | If <code>FALSE</code> , no output will be printed. |
| exact | If <code>TRUE</code> , search only for perfect name match. |
| ... | Further potential arguments passed to methods. |

Details

This function is used to split motifs that correspond to the filters.

Many filter could be passed in argument separated by comma. They will be considered independently (comma is considered as OR).

Value

A list of `motiv` object.

Author(s)

Eloi Mercier <<eloi.mercier@ircm.qc.ca>>

```

```
transcriptionFactor-class
```

Transcription Factor Class

Description

This object contains the Transcription Factor name and PWM.

Objects from the Class

Objects can be created by calls of the form `new("transcriptionFactor", name, pwm)`.

Slots

name TF name.

pwm TF PWM.

Author(s)

Eloi Mercier <<eloi.mercier@ircm.qc.ca>>

See Also

`motiv`, `matches`, `alignments`

Examples

```
showClass("transcriptionFactor")
```

```
trimPWMedge
```

Trim PWM edge

Description

This function is use to cut edges with low information content.

Usage

```
trimPWMedge(x, threshold=1)
```

Arguments

`x` A matrix representing a PWM.

`threshold` A transcription factor name or a list of TF names.

Value

A PWM.

Author(s)

Eloi Mercier <<eloi.mercier@ircm.qc.ca>>

See Also

makePWM

Examples

```
#####Database and Scores#####
path <- system.file(package="MotIV")
jaspar <- readPWMfile(paste(path, "/extdata/jaspar2010.txt", sep=""))

#####Input#####
data(FOXA1_rGADEM)
motifs <- getPWM(gadem)
motifs.trimmed <- trimPWMedge(motifs, threshold=1)
```

viewAlignments

Print Motifs Alignments

Description

This function return a list of the alignments of a motif object for each motif.

Usage

```
viewAlignments(x)
```

Arguments

x An object of class motif (usualy provied by motifMatch).

Details

This function shows the alignements for each motif.

Author(s)

Eloi Mercier <<eloi.mercier@ircm.qc.ca>>

Examples

```
#####Database and Scores#####
path <- system.file(package="MotIV")
jaspar <- readPWMfile(paste(path, "/extdata/jaspar2010.txt", sep=""))
jaspar.scores <- readDBScores(paste(path, "/extdata/jaspar2010_PCC_SWU.scores", sep=""))

#####Input#####
data(FOXA1_rGADEM)
motifs <- getPWM(gadem)
motifs.trimmed <- trimPWMedge(motifs, threshold=1)
```

```
#####Analysis#####
foxa1.analysis.jaspar <- motifMatch(inputPWM=motifs,align="SWU",cc="PCC",database=jaspar,
summary(foxa1.analysis.jaspar )
viewAlignments(foxa1.analysis.jaspar )
```

viewMotifs-methods *Print Identified Motifs*

Description

This function return a list of the identified motifs contained in a `motiv` object.

Usage

```
## S4 method for signature 'motiv':
viewMotifs(x, n=100)
```

Arguments

| | |
|----------------|---|
| <code>x</code> | An object of class <code>motiv</code> (usualy provied by <code>motifMatch</code>). |
| <code>n</code> | The number of motifs shown. |

Details

This function shows the number of identified motif.

Value

A list of motifs names.

Author(s)

Eloi Mercier <<eloi.mercier@ircm.qc.ca>>

Examples

```
#####Database and Scores#####
path <- system.file(package="MotIV")
jaspar <- readPWMfile(paste(path, "/extdata/jaspar2010.txt", sep=""))
jaspar.scores <- readDBScores(paste(path, "/extdata/jaspar2010_PCC_SWU.scores", sep=""))

#####Input#####
data(FOXA1_rGADEM)
motifs <- getPWM(gadem)
motifs.trimed <- trimPWMedge(motifs, threshold=1)

#####Analysis#####
foxa1.analysis.jaspar <- motifMatch(inputPWM=motifs,align="SWU",cc="PCC",database=jaspar,
viewMotifs(foxa1.analysis.jaspar, 5)
```
